LOS ALAMOS NATIONAL LABORATORY
RICHARD P. FEYNMAN CENTER FOR INNOVATION
SUBCONTRACT EVAULATION OF SOFTWARE DEVELOPMENT

Purpose:
The purpose of this evaluation is to gather the information concerning software development under the proposed subcontract. The review of subcontracts which involve software is vital to ensure that LANS IP rights are properly preserved in a manner that supports the related program(s) and the institution in its entirety.

Instructions:
1. All fields are required; if a field is not applicable put "N/A."
2. This form should be submitted to FCI with the executed agreement, proposed SOW, and/or modifications.
If you have questions, please contact the FCI Software team directly at software@lanl.gov.

Title:

PR/Contract Number: **Principal Investigator(s):**

Subcontractor: **Subcontractor POC:**

Anticipated Start Date: **ASM POC:**

1. Please describe the software development or modification proposed under the subcontract. Please list *any related* LANS software (including the specific version if appropriate). If software will not be developed or modified, but will be *used*, please also list these software here.

2. Is the PI listed above the copyright steward of referenced LANL software? If not, please list the appropriate copyright steward point of contact.

3. Please list the funding program/sponsor for the referenced LANL software.

4. For subcontracts involving multiple software development tasks: are the different tasks related, or are they all separate and distinct? (I.e. Developments to LANL software and development of additional codes to interface with LANL software versus modification of LANL software and development of additional unrelated test codes).

5. How is the code being created – is it being completely written from scratch or are these improvements to existing software? If there are multiple software development tasks, please answer for each task.

6. After development, how will this code be used and/or released? E.g. is the intention for LANS and Subcontractor to be the sole users or to pursue a controlled or open source distribution?

7. Does the subcontract currently include data rights provisions? If so, please include them below. Please note that this does not include the 'Access to Limited Rights Data Provisions'.

8. Is the underlying algorithm of the associated software novel or related to any other disclosures? Please answer this question for software that is modifed, as well as used.
